

HERVEY BAY AIRPORT INDUSTRIAL PARK

Issue 1

Progress Photo of Airport 24/2/05

Precincts

The subdivision will be divided into 7 or 8 different precincts (as per master plan). The idea of the precincts is to cluster various industry groups together to create synergies and help enhance to individual businesses. It will also effect the building styles in each precinct.

Government Assistance

Seashift can assist you in obtaining funding for your proposed development! With the new Hervey Bay Airport Industrial Park Development there will be a variety of economic assistance and funding opportunities available for start up, relocation, training, and/or re-equipment that can be accessed, depending on your needs, financial status and the nature of your project. We will take your proposal and build a convincing case to the granting body on a no-gain, no pay basis. Standard fees will be discussed with you prior to the application. Should you wish to take advantage of this service for any proposed development in the estate area please contact our office and fill in our grant application form.

Master Plan

We are making good progress on the master plan and should have it finalised very soon. Once this is done we will be able to discuss everyone's expression in detail and work out how we can accommodate the individuals needs.

Expression of Interest

If you have not already filled in an expression of interest form and are interested in buying land, or finished building or leasing a building please do so by contacting C21 Project Marketing QLD

Principal Body Corporate

We intend putting a principal body corporate over the entire estate. The purpose of this is to ensure the quality of the project, including such items as covenants, building types, landscaping, industry precinct and long term maintenance of the estate. This is a unique concept and will provide many benefits for all the development businesses housed in the estate.
